### DETAILED ACTION

1. This office action is in response to application 10/648,124 and Amendment filed on 07/21/2006. Claims 9 and 14 have been cancelled. Claims 1-8, 10-13 and 15-30 are pending in the application.

#### *Election/Restrictions*

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-8, 10 and 16-25 (Group 1), drawn to a client-server semiconductor verification system, said system comprising **a client computer storing a test job** for testing a design of a programmable logic circuit; and a server coupled to said client computer by way of a network, said server receiving said test job from said client computer, classified in class 716, subclass 4.

II. Claims 11-13, 15 and 26-30 (Group 2), drawn to a client-server semiconductor verification system, said system comprising a plurality of client computers, wherein **a client computer** of said plurality of client computers **generates a test job** for testing the design of a programmable logic circuit; **a job distribution server** coupled to said plurality of client computers by way of a network, said job distribution server receiving said test job from said client computer; and **a server coupled to said plurality of client computers by way of said job distribution server**, said server receiving said test job from said job distribution server, classified in class 716, subclass 4.

Inventions 1-8, 10 and 16-25 (Group 1) and 11-13, 15 and 26-30 (Group 2) are related as combination and subcombination. Inventions in this relationship are distinct if

it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed, because Group 2 includes **a job distribution server**. The subcombination has separate utilities such as: **a client computer generates a test job** for testing the design of a programmable logic circuit; **a job distribution server** coupled to said plurality of client computers by way of a network; and **a server coupled to said plurality of client computers by way of said job distribution server, said server receiving said test job from said job distribution server**".

3. Because these inventions are distinct for the reasons given above, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
